

ReWind Update 1

April 2026

Pardesh Dhakal, Angel Manson, & Cheyenne Mowatt

App Overview

- Many people want to journal consistently, yet most existing journaling tools focus only on writing rather than reflection.
- Users often capture thoughts in the moment but rarely return to analyze patterns, growth, or emotional change over time.
 - Journaling becomes a collection of isolated entries rather than a meaningful narrative.
- This application aims to transform journaling from a sporadic habit into a long-term practice supported by AI.

Requirement Integration

API Integration

- Affirmation Generator API
- User will see a new daily affirmation on the home screen

Welcome back, Angel!

Today's affirmation

You are allowed to notice how far you have already come.

Data Persistence

- Room to store data locally
 - Entries & folders
- Firebase Authentication will identify each user with a secure account.
- When online, local data will sync to Cloud Firestore

Sensors

- Location services
- With permission granted, device location data will be saved with each entry
- Timeline feature will be able to detect travel

AI Features - A Work In Progress

- AI-powered summaries, mood insights, and topic tagging are planned features
- The present version focuses on core journaling; AI support will be added in a later iteration.
- AI features will analyze a user's past entries to build two scrollable timelines: one emotion-driven timeline that charts mood over time, and one event-driven timeline that highlights significant moments
